Web Development React Tailwind Bootstrap GSAP MERN

App Development Flutter RestApi FireBase SQL

Python Game Development Machine Learning Data Sciences

Personal Projects

DisPakistan (Digital Invoice Solutions)

- Developed a full-stack digital invoicing platform for FBR/IRIS tax compliance in Pakistan using the MERN Stack. Implemented bulk invoice submission via Excel/XLSM upload with smart header detection, automated data mapping, and IRIS template validation. Key features include customer registration and profiling, invoice generation and preview, sales analytics with Recharts, OTP-based authentication, and a polished animated UI with Framer Motion. Focused on streamlining the end-to-end tax invoicing lifecycle for Pakistani businesses.

TheOnline365 (Prep Services Portal)

- Built a full-stack multi-portal prep services platform for e-commerce businesses (Amazon, eBay, Walmart) using the MERN Stack. Features include inbound/outbound/return order management, real-time inventory tracking, automated billing with tiered pricing, sales reporting with PDF export, team management with role-based access, and OTP-based authentication. Deployed with Nginx, Redis caching, PM2 cluster mode, and CI/CD via GitHub Actions.

Hue Hub

- Developed a full-stack color palette generator web app using PHP and Laravel. Recreated key features of Colors.com, including palette creation, saving, and sharing, with a custom backend and sleek, frontend.

Unique Art Generator

- Built an AI-powered art generation tool using StyleGAN2, allowing users to generate unique artwork based on text prompts. Integrated deep learning with an interactive interface for real-time creative outputs. (In Progress)

Education

Bachelor's of Science in Computer Science (2022 - 2026)

National University of Modren Languages (NUML)

Intermediate in Computer Sciences (2020 - 2022)
